# Agenda

- Introduction
- Institutional context
- Methodology
- Key findings
- Policy implications
- CPI Rio projects
- Q&A

# Introduction | The Brazilian Amazon

## ■ The Brazilian Amazon

- 4 million km<sup>2</sup>
  - 80% remains covered by native vegetation
- 20% of planet's fresh water
- Unique biodiversity
- Carbon sink

... combating illegal deforestation is an **immense challenge** !

# Introduction | The Brazilian Amazon

# Introduction | This Study

- Main question
  - What role did monitoring and law enforcement play in the recent deforestation slowdown?
  
- Our approach
  - Empirical regression-based analysis
    - Sample: 526 Amazon municipalities from 2007 through 2011
  - Explore policy implementation details to assess policy effectiveness
    - Satellite-based targeting of monitoring and law enforcement

# Introduction | This Study

- Main findings
  - Large deterrent effect of monitoring and law enforcement
    - 2007-2011: preserved over 59,500 km<sup>2</sup> of Amazon forest
  - Estimated monetary benefits are larger than costs
  - Forest preservation occurred at no apparent cost to local agricultural production
- Monitoring and law enforcement policy

**effective**

&

**low-cost**

monetary  
agricultural

# Agenda

- Introduction
- Institutional context
- Methodology
- Key findings
- Policy implications
- CPI Rio projects
- Q&A

## Institutional Context | What is Ibama?

- Brazilian Institute for the Environment and Renewable Natural Resources [**Ibama**]
  - Environmental monitoring and law enforcement authority
  - Police force
  - Investigation of environmental infractions
  - Sanctioning of environmental crimes

## Institutional Context | Policy Change

- Pivotal conservation effort of 2000s
  - Plan for the Prevention and Control of Deforestation in the Amazon [**PPCDAm**]
- Stricter monitoring and law enforcement
  - Real-Time System for Detection of Deforestation [**DETER**]
    - Satellite-based real-time monitoring

# Institutional Context | How DETER Works

National Institute  
for Space Research

+

Remote Sensing  
Center

# Institutional Context | How DETER Works

before

after

# Institutional Context | How DETER Works

# Institutional Context | How DETER Works

National Institute  
for Space Research

+

Remote Sensing  
Center

## Institutional Context | How DETER Works

- Targeting before DETER
  - Voluntary reports of deforestation activity
- Targeting after DETER
  - Satellite imagery: 3-day intervals, year-round
  - More timely law enforcement action

... **significant improvement** in Amazon monitoring and law enforcement capability

- DETER is incapable of capturing land cover patterns beneath cloud coverage

# Institutional Context | How DETER Works

Jan 2011

Apr 2011

Jul 2011

Oct 2011

# Agenda

- Introduction
- Institutional context
- Methodology
- Key findings
- Policy implications
- CPI Rio projects
- Q&A

## A Word on Methodology

- Goal: identify **causal effect** of Ibama's presence on deforestation activity
  - Environmental fines as measure of Ibama's presence
- Challenge: address **two-way causality**

monitoring and  
law enforcement

deforestation

## A Word on Methodology

- Use DETER cloud coverage as source of exogenous variation in law enforcement
  - What does this mean?
  - For a given area, systematically:

Greater DETER cloud coverage

Lower chance of DETER issuing alert

Lower chance of Ibama targeting the area

Lower intensity of monitoring and law enforcement

**... unrelated to deforestation!**

# Agenda

- Introduction
- Institutional context
- Methodology
- Key findings
- Policy implications
- CPI Rio projects
- Q&A

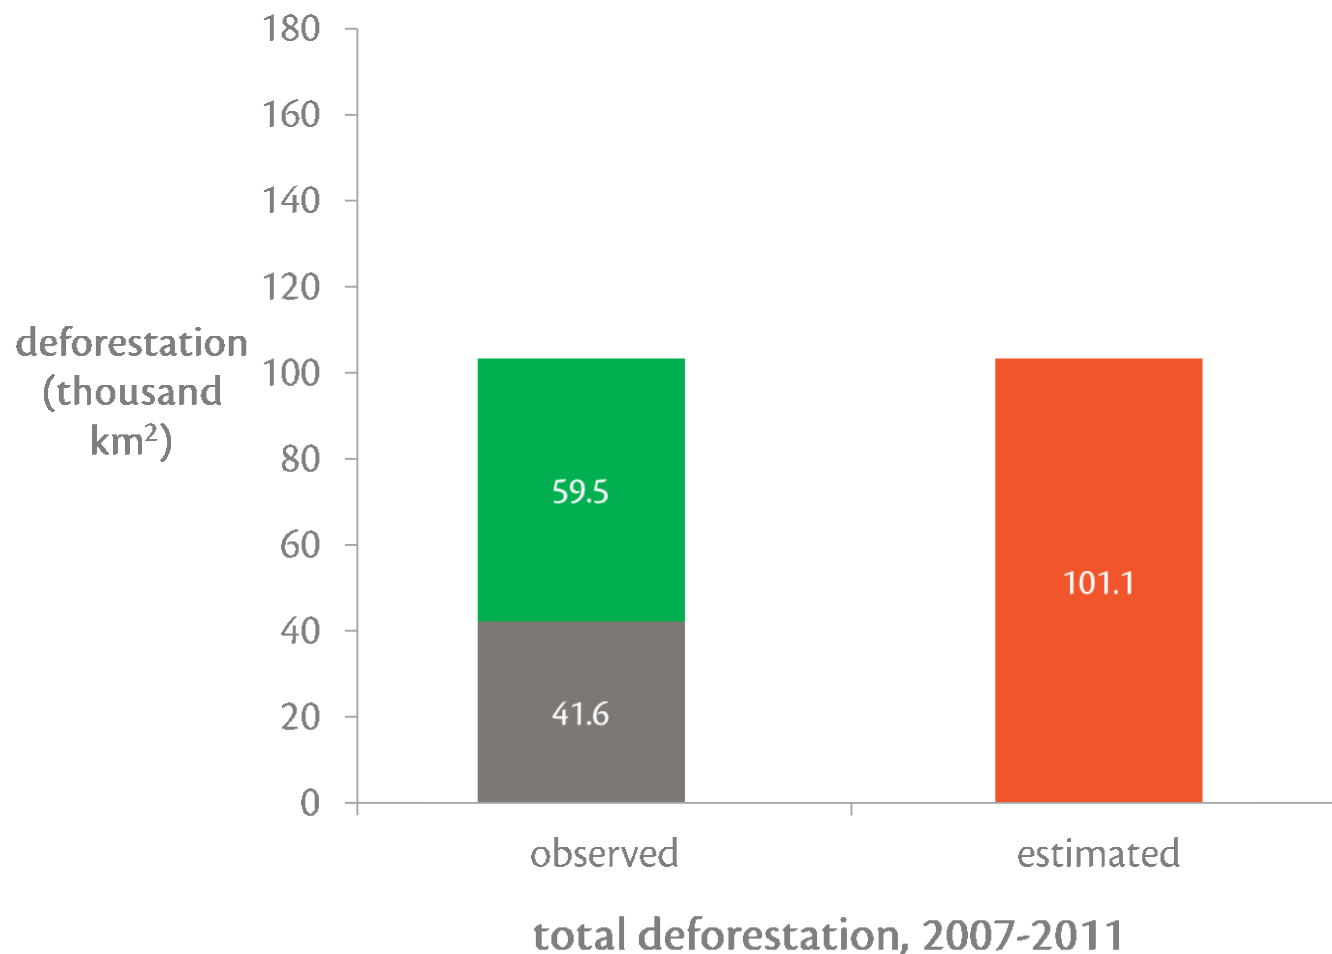

## Results | Key Findings

- DETER cloud coverage affects Ibama's presence
  - Lower cloud coverage leads to greater number of fines
- Ibama's presence affects deforestation activity
  - Greater number of fines in current year leads to lower deforestation in following year
  - Deterrent effect dissipates over time

## Results | What Does This Mean?

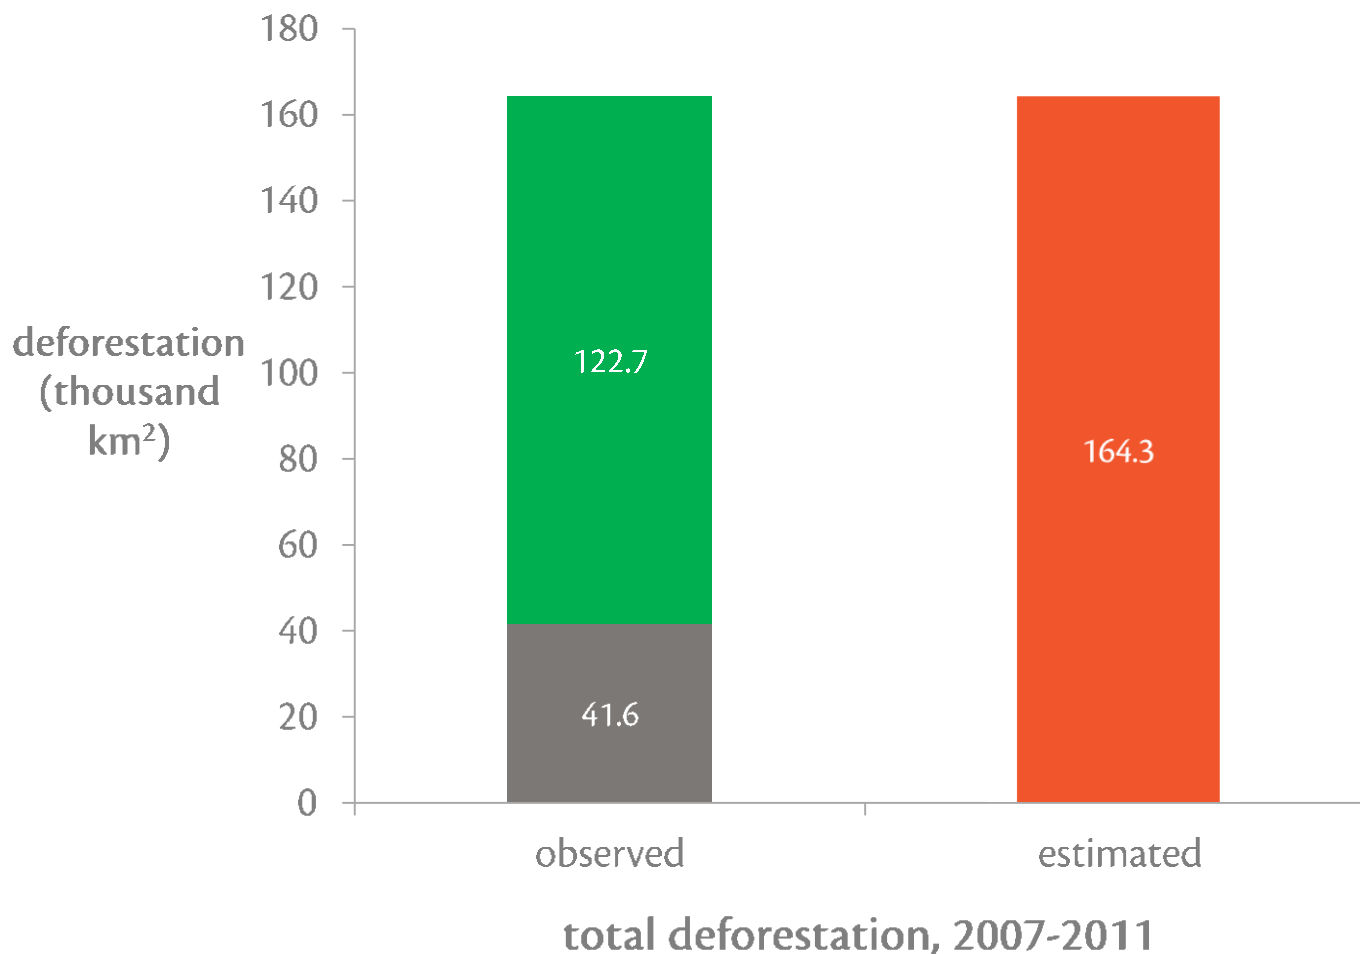

- What if Amazon monitoring and law enforcement capability had not improved starting in 2004?

## Results | What Does This Mean?

- What if Amazon monitoring and law enforcement had been entirely inactive?

## Results | What Does This Mean?

- Simulation 1: 59,500 km<sup>2</sup>
  - $\approx \frac{2}{3}$  area of Portugal
  
- Simulation 2: 122,000 km<sup>2</sup>
  - $\approx$  area of Nicaragua
  - Avoided emissions equivalency: 900 million tCO<sub>2</sub> per year
    - $\frac{1}{2}$  US 2011 transport sector emissions
    - 2.5–3 times average annual emissions savings from European renewables sector

# Results | Worth It?

## ■ Cost-benefit analysis

24,500 km<sup>2</sup>

average forest area  
preserved per year

=

900 million tCO<sub>2</sub>

avoided emissions  
per year

benefit

560 million USD

125 million USD

annual budgets for Ibama  
and INPE

=

685 million USD

annual budget for Amazon  
monitoring and law enforcement

cost

5 USD/tCO<sub>2</sub>

common current  
price of carbon

>>

0.76 USD/tCO<sub>2</sub>

break-even price of carbon

low monetary cost

## Results | Key Findings

- Tradeoff between economic growth and preservation?
- Ibama's presence does not affect local agricultural production
  - Greater number of fines has no impact on local agricultural GDP or crop production

**low agricultural cost**

# Agenda

- Introduction
- Institutional context
- Methodology
- Key findings
- Policy implications
- CPI Rio projects
- Q&A

## Policy Implications

- Maintain Amazon monitoring and law enforcement efforts
  - Strong deterrent effect at relatively low cost
  - Need for continuous policy action
  - Complementary nature of other conservation policies
  
- Promote strategic use of technology and information
  - Improve monitoring technology
  - Further enhance law enforcement capability

# Agenda

- Introduction
- Institutional context
- Methodology
- Key findings
- Policy implications
- CPI Rio projects
- Q&A

# CPI Rio Projects | Land Use

## ■ Deforestation

- Prices or policies?
  - Conditional rural credit
  - Monitoring and law enforcement
  - Net impact of protected areas
- Socioeconomic impact of conservation policies
- Forest clearing behavior

## ■ Agriculture

- Enhanced productivity
  - Technological adoption
  - Insurance for rural producers
